

2/19/17 / 1/18/17

1. What are the three main types of cells in the nervous system?
Neurons, glial cells, and support cells.

2. What are the three main types of neurons?
Sensory neurons, motor neurons, and interneurons.

3. What are the three main types of glial cells?
Astrocytes, oligodendrocytes, and microglia.

4. What are the three main types of support cells?
Ependymal cells, Schwann cells, and satellite cells.

5. What are the three main types of neurons?
Sensory neurons, motor neurons, and interneurons.

6. What are the three main types of glial cells?
Astrocytes, oligodendrocytes, and microglia.

7. What are the three main types of support cells?
Ependymal cells, Schwann cells, and satellite cells.

8. What are the three main types of neurons?
Sensory neurons, motor neurons, and interneurons.

9. What are the three main types of glial cells?
Astrocytes, oligodendrocytes, and microglia.

10. What are the three main types of support cells?
Ependymal cells, Schwann cells, and satellite cells.
